

Use Informix client (Informix connect 3.5) on XP connect to remote Informix Database

Shane

2012-12

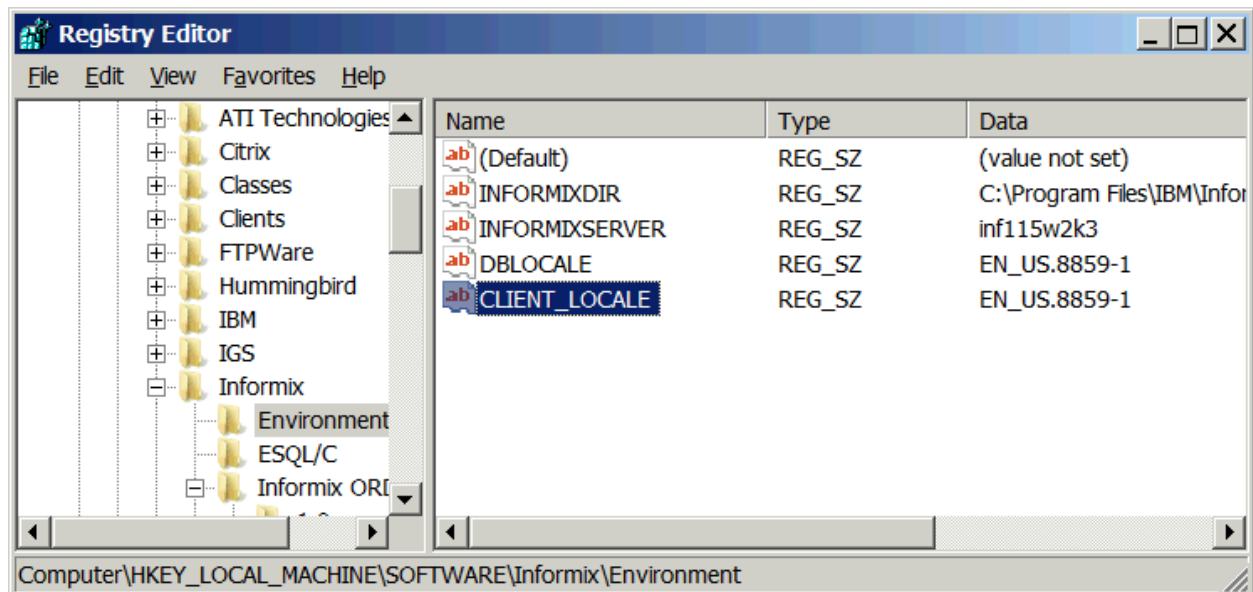

1. Configurations on XP

1. Add remote server IP C:\Windows\system32\drivers\etc\hosts:
Vottdts17 9.24.117.208 (this IP is according to the defect I have done)
2. Add service name ,port number and protocol of remote Database(service info can be found on IBM DTS page):
Turbo115 9088/tcp ()

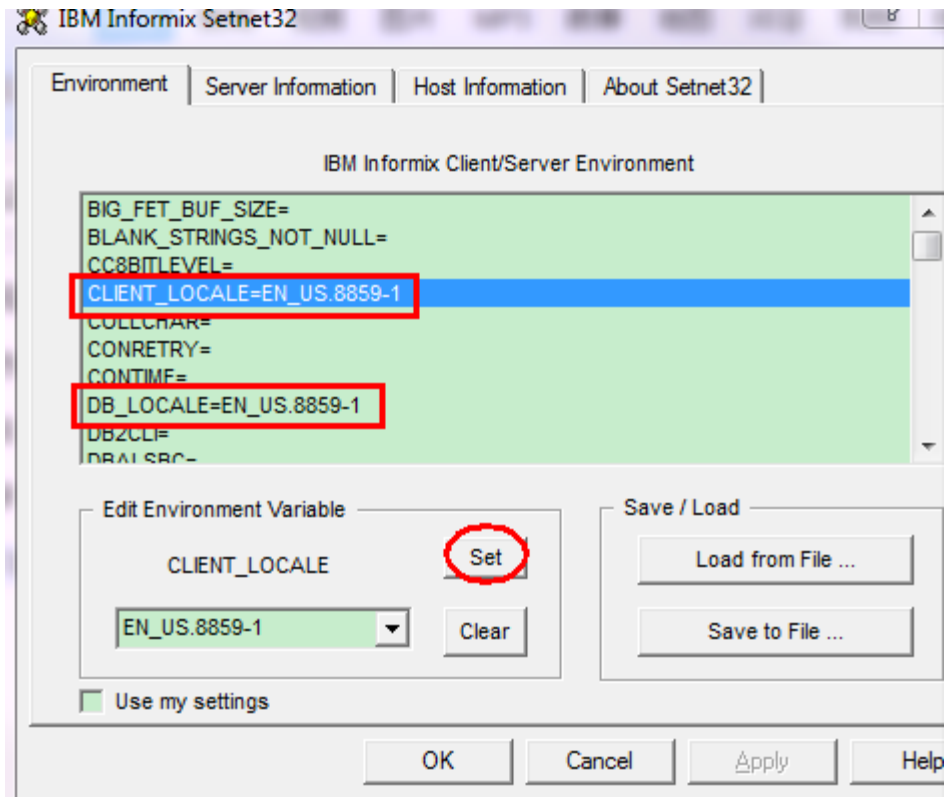

2. Configurations on Informix Client.

Install Informix connect 3.5, find the database information which you want to connect on IBM DTS web site.

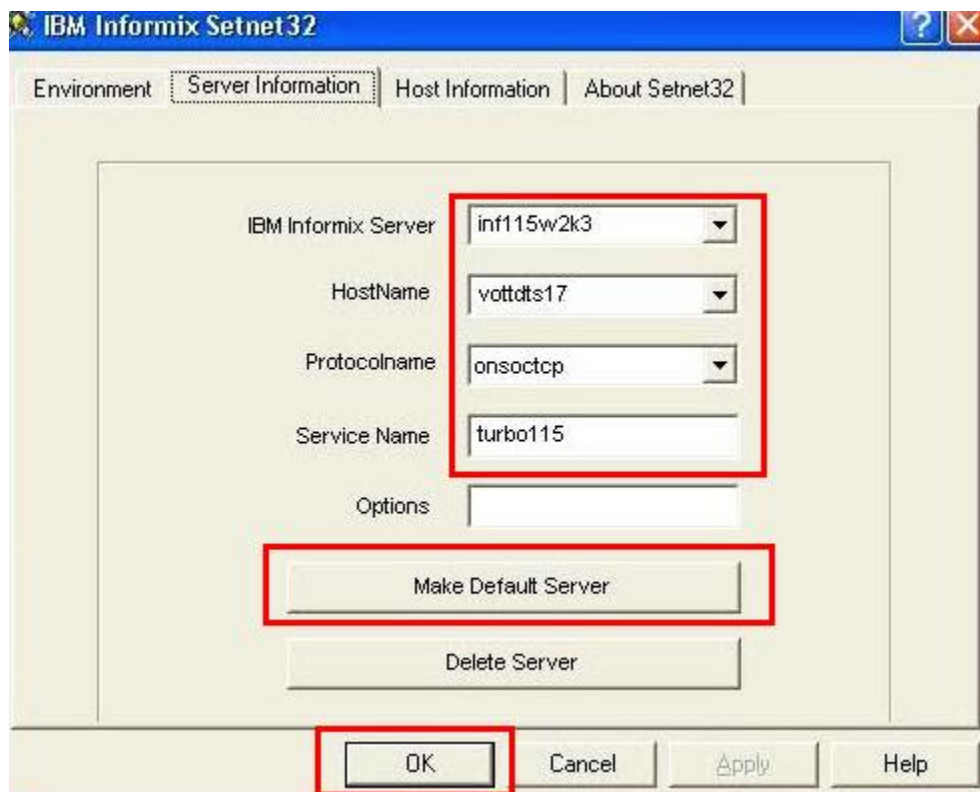

1. Open Setbet32, under Environment Tab, make sure your machine's locale is identical to sever side. Mostly, you can use the following Locale.

The Setnet32 Environment configuration should be like this, use Set button to set the Environment Variable

2. Fill Server Information Tab: all the red area should be filled

3. Fill Host Information Tab: all the red area should be filled

IBM Informix Setnet32

Environment | Server Information | **Host Information** | About Setnet32

Current Host:

User Name:

Password Option:

Password:

Delete Host

OK Cancel Apply Help

4. Check if the connection is successful. Open **llogin Demo**, Fill the login Parameters according to your remote server information.

Login Parameters

Server:

Hostname:
