

How to enable the Pseudo Translation for Danube

1. Install Pseudo Install Kits from the location below on the top of the BI installation

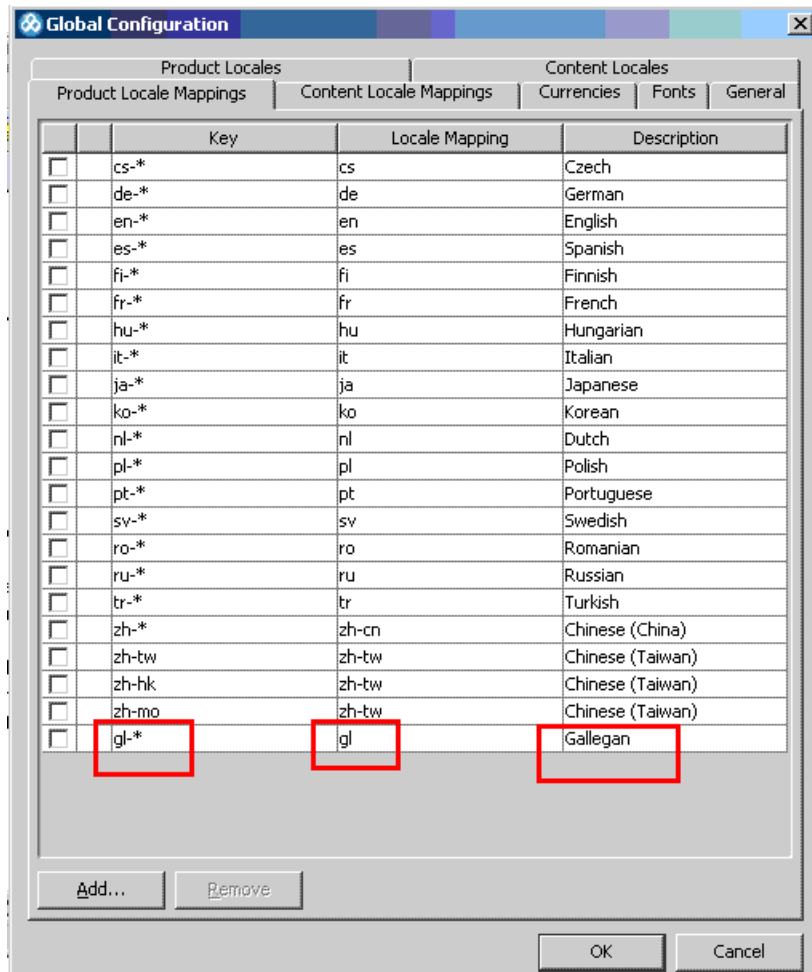

[\\sottbuild1f.ottawa.ibm.com\danube\cdsets\dnbpseudolangcdset](https://sottbuild1f.ottawa.ibm.com/danube/cdsets/dnbpseudolangcdset)

Be sure to install the pseudo install kit in the same location as BI server.

2. Then open Cognos Configure Tool -> Actions -> Edit Global Configuration...
3. Add gl to the Product Locales

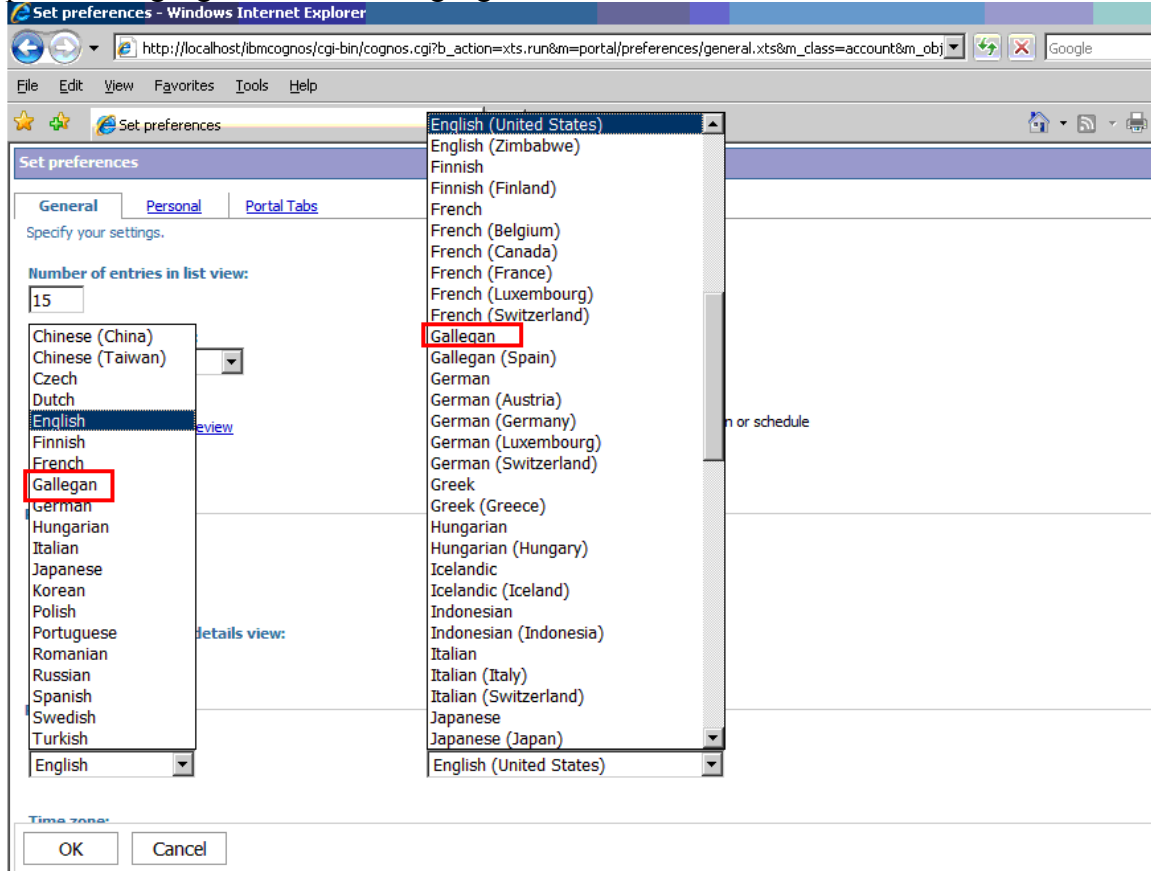

4. Add gl-* to Product Locale Mappings

5. **Configure to use a brand new content store.**

6. Apply and start the C10 Service

7. Logon Cognos Connection, go to “My preferences” page, select “Gallegan” as product language and content language.

8. Then the Pseudo translation appears on the UI as below.
